

GPS-Datasheet

1. Product Information

It is a compact, high performance, and low power consumption GNSS engine board.

It uses the chipset which can track up to 56 channels at a time and perform fast TTFF in weak signal environments.

It is suitable for the following applications:

- Automotive navigation
- Personal positioning
- Fleet management
- Mobile phone navigation
- Marine navigation

Product Features:

- High performance and low power consumption GPS Chipset
- Very high sensitivity
- Extremely fast TTFF (Time To First Fix) at low signal level
- Two serial ports
- Built-in LNA
- Compact size suitable for space-sensitive application
- One size component, easy to mount on another PCB board
- Support NMEA 0183 and ublox binary protocol

Product Specifications

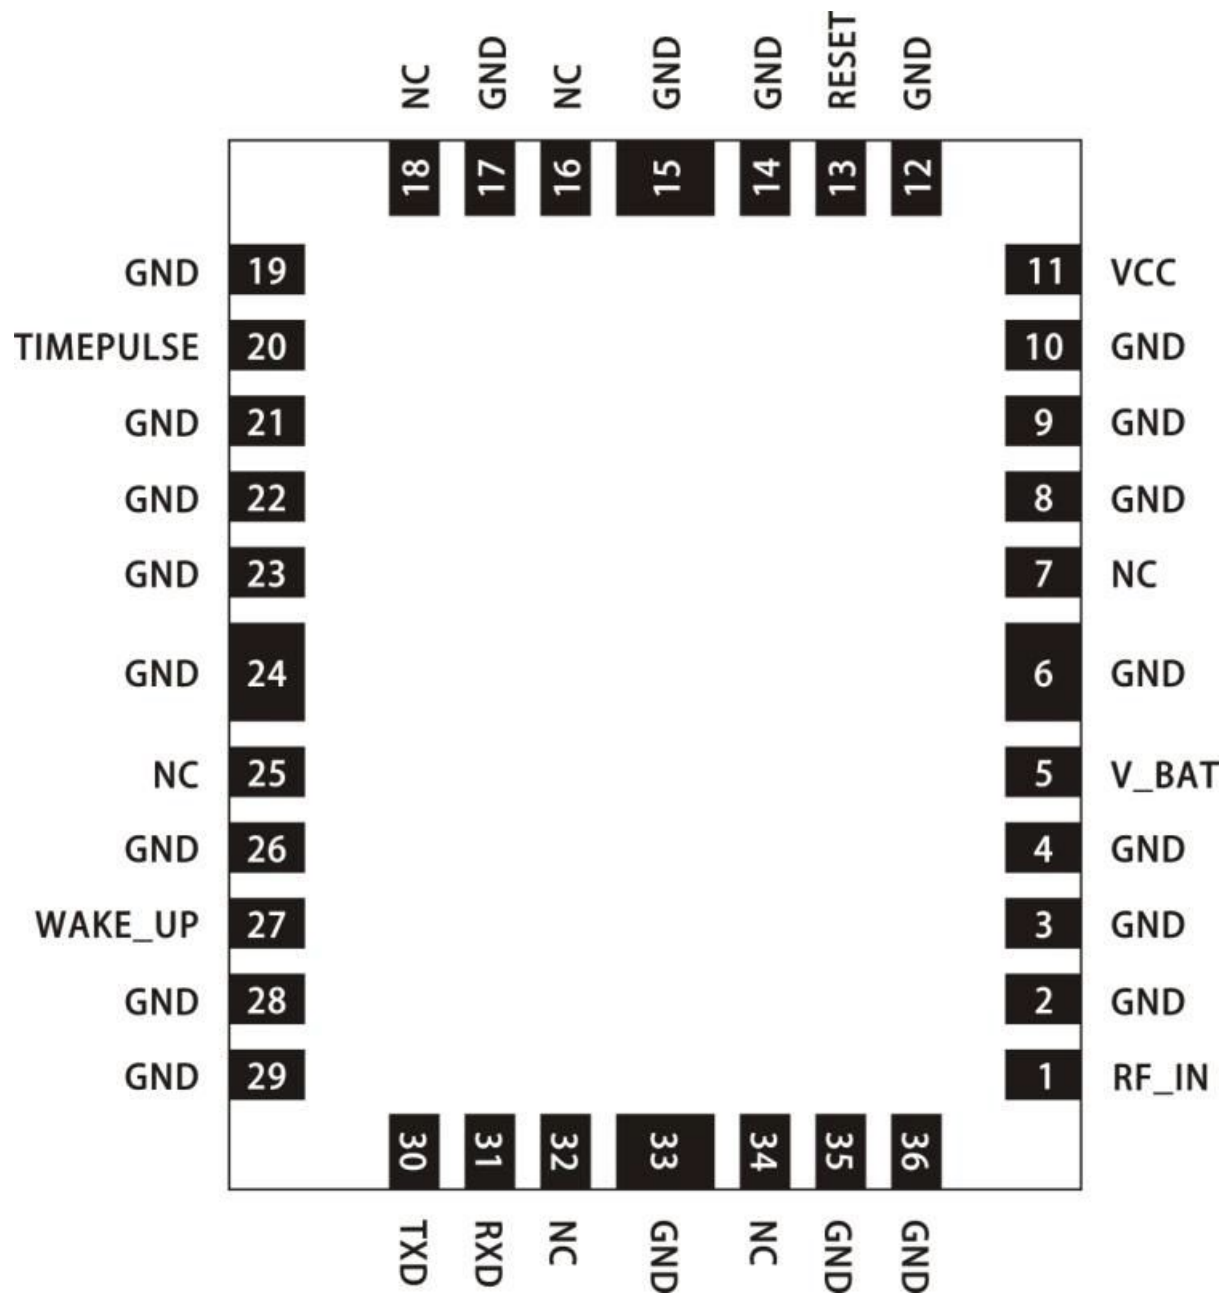

GPS Performance

GPS Receiver	
Frequency	L1 frequency band
Code	C/A Code
Protocol	NMEA 0183 v4.1 GALILEO L1 open service (with upgrade) Default:GGA,GSA,GSV,RMC Support:VTG,GLL,TXT ublox binary and NMEA Command
Available Baud Rate	9,600 bps
Channels	56
Sensitivity	Tracking:-161dBm Reacquisition:-160dBm ColdStart:-147dBm
Cold Start	29 seconds, average
Warm Start	28 seconds, average
Hot Start	1 second, average
Accuracy	HorizontalPosition:Autonomous<2.5maverage, SBAS < 2.0m average Velocity: 0.1 m/s Timepulse signal: RMS 30 ns
Maximum Altitude	50,000 meter
Maximum Velocity	515 m/s(1000 knots)
Dynamics	$\leq 4G$
Update Rate	4 Hz
A-GPS	AssistNow on-line and off-line
Interface	
I/O Pins	1 serial ports
Physical Characteristic	

Type	36 pin stamp holes
Dimensions	15.9mm * 13.1 mm * 2.2mm ±0.2mm
DC Characteristics	
Power Supply	3.3VDC ± 5%
Backup Voltage	1.8~3.6VDC
Power Consumption	Max Performance: Acquisition:49mA Tracking: 42mA Eco Mode: Acquisition:48mA Tracking:38mA Power Save Mode: 16mA
Environmental Range	
Humidity Range	5% to 95% non-condensing
Operation Temperature	-40°C to 85°C
Storage Temperature	-40°C to 85°C

GLONASS Performance

3. Application guideline

Layout Rules

Do not routing the other signal or power trace under the engine board .

* RF:

This pin receives signal of GPS analog via external active antenna .It has to be a controlled impedance trace at 50ohm.

Do not place the RF traces close to the other signal path and not routing it on the top layer. Keep the RF traces as short as possible.

* Antenna:

Keep the active antenna on the top of your system and confirm the antenna radiation pattern、 axial ratio, power gain, noise figure, VSWR are correct when you Setup the antenna in your case.

Design Notes

VCC

This is the main power supply to the engine board. (3.3Vdc \pm 5%)

GND

Ground pin for the baseband circuit.

RXD

This is the main channel for receiving software commands from u-blox software or from your proprietary software.

TXD

This is the main transmits channel for outputting navigation and measurement data to user's navigation software or user written software.

Output TTL level, 0V ~ 2.85V

RF_IN

This pin receives signal of GPS analog via external active antenna . It has to be a controlled impedance trace at 50ohm. Do not have RF traces closed the other signal path and routing it on the top layer.

Keep the RF traces as short as possible.

V_BAT

This is the battery backup power input for the SRAM and RTC when main power is removed. Typical, the current draw is 15uA. Without the external backup battery, the module/engine board will always execute a cold start after turning on. To achieve the faster start-up offered by a hot or warm start, a battery backup must be connected. The battery voltage should be between 1.8v and 3.6v.

Timepulse

1 pulse per second synchronized at rising edge pulse length 100ms.

4. NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a \$ and with carriage return/line feed. GPS specific messages all start with \$GPxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a checksum, which allows detection of corrupted data transfers.

Modules support the following NMEA-0183 messages: GGA, GLL,GSA, GSV, RMC and VTG.

Table 1: NMEA-0183 Output Messages

NMEA Record	DESCRIPTION
GGA	Global positioning system fixed data
GLL	Geographic position—latitude/longitude
GSA	GNSS DOP and active satellites

GSV	GNSS satellites in view
RMC	Recommended minimum specific GNSS data
VTG	Course over ground and ground speed
